

Stock List Pro Crack+ Activation Code

Stock List Pro is designed to help you monitor the stock market automatically, updating your database with the latest stock changes so you can make decisions in real time. Monitoring stocks is only part of the program, though. The rest is very comprehensive, so it can cover just about any financial aspect. There are 5 main tabs to choose from in the program's main window. The Portfolio tab will display the details of your current portfolio, with its total value, your profit, your equity, the average price per share, your percentages, the average duration and your total exposure, amongst other things. The Watch List tab will display the stocks you defined with the target price. The "Add/Remove from Watch List" feature is intuitive and straightforward. In the Account Manager tab, there are 3 sections that allow you to configure the stocks that you want to be monitored, as well as their target price, the trading time frame you want to observe them and the type of accounts (stocks, indexes, etc.). There's also a separate tab for your bonds. The historical prices feature will store the latest changes for you to find out how the stock has evolved in the past, so you can see which of your investments performed well or badly. The Currency Conversion feature is a convenient feature that will show you the real exchange rates for different currencies, so you can monitor the overall performance of your portfolio. The Risk Calculator feature will tell you the percentage of loss you'd be facing if the current value of your portfolio suddenly decreased. The Calculator will calculate it for you and give you a recommendation. There are multiple warnings that will be displayed so you'll know when you're approaching a danger zone. All these features are supported with 2 different analysis methods: the Technical Analysis and the Fundamental Analysis. The Technical Analysis method is geared towards experienced investors, while the Fundamental Analysis is aimed at first-time investors. Each method is described in detail in the help section, which is available at all times. When looking at the program's interface, you'll notice that there are some elements that are the same across all tabs, such as the layout of the data fields and the zoom functions. The Risk Calculator is worth a separate mention as it displays the important calculations of the program itself, which means that the Risk Calculator feature is very handy. What's New In Stock List Pro?

Stock List Pro is a handy and reliable program designed to monitor the stock market automatically, keeping tabs on the quotes that are of interest to you. It is suited for stockbrokers, financial analysts, as well as home users who are looking to invest money in stocks and to follow their evolution, so as to estimate the profit that comes from such an activity. Stock List Pro is a no-cost application, which is why its feature set is somewhat limited, as opposed to paid stock market software. A lot of operations require user intervention, but on the bright side, the monitoring part is done automatically through the stock refresh feature. This allows the program to connect to the Internet (hence, an Internet connection is needed) and to fetch stock changes, at a user-defined time interval. Then, your stock database is updated on the spot to reflect the new values. The main window is fairly simple, remaining intuitive throughout your whole experience with it. New stocks can be added to the monitoring list using a very concise dialog, where details such as stock code and name, average price and quantity are requested in order to properly configure the records. The Watch List section, however, is slightly different than the Portfolio; it can monitor stocks and let you know when a certain stock reaches a target price that was previously specified by the user. The most stringent downside is that there's no possibility to automatically fetch the details of a stock, thereby you will have to compensate for this shortage by hand. Overall, Stock List Pro is intuitive and easy to use, but could use an improved engine that can retrieve stock information by default in order to reduce user efforts.
