Autodesk, Inc. is an American company that develops and markets 3D computer graphics software and software applications for architecture, manufacturing, construction, engineering, and media visualization. Autodesk products are used in industries such as architecture, construction, engineering, manufacturing, multimedia, graphic design, and

---

education. Autodesk is best known for its 3D modeling and animation products such as AutoCAD, which is the world's most widely used desktop-based 3D modeling and CAD application. AutoCAD competes with Google Sketchup, and other competing products. AutoCAD is a freeware, and users pay the yearly subscription fee to use other Autodesk products, including: Autocad Electrical, Autodesk Alias-Wavefront 3D,

---

AutoCAD LT, Autodesk 3ds Max, AutoCAD MEP, AutoCAD Web 3D, Autodesk Maya, and others. AutoCAD is capable of performing technical and drafting functions such as designing and building mechanical, electrical, and architectural systems and services. It also functions as a CAD program, which enables its users to view, create, manipulate, and print 2D and 3D graphical designs. The program is used to

---

create blueprints for mechanical and electrical designs. Its functions extend to the design of other materials such as metal, wood, fiberglass, stone, plastics, and other types of products.

AutoCAD and other Autodesk software products are the industry standard for designing both consumer and industrial products. AutoCAD is used in the world's largest design studios, including 3M, Airbus, Boeing, Caterpillar, Ford Motor

Company, Honda, and Nissan. AutoCAD is also used in hundreds of countries by more than 50 million users. .NET C# and IronPython are language interoperability layers that allow programmers to develop extensions in other languages and compile them to an intermediate language that Cracked AutoCAD With Keygen can then compile to machine code. engineering, landscape architecture, engineering, and GIS. It is also a powerful, yet easy-to-learn drafting program, which can be used as a replacement for Microsoft Windows' native drawing application. The Python language is used to create Python plugins. There are three major AutoCAD plugins available in the Autodesk Exchange Apps. They are for Python, AutoLISP and C++. The Windows command line of

---

AutoCAD contains commands for many software functions. These include database management, file management, text manipulation, drawing and plot creation, and many other functions. The Win32 API, which is an open standard, is used to implement these functions. Win32 API is a type of API for programming Microsoft Windows systems. Most modern programming languages support this API.

---

AutoCAD uses this API to provide command-line access to its features. Operations are the functions used to create a model, add elements, and define styles. Operations are grouped into three categories: Drawing operations are commands to create the objects and features contained in a drawing. Drawing operations include: creating text, drawing dimensions, creating dimensions, drawing lines,

drawing polylines, creating circles and curves, drawing arcs and splines, creating circles and polygons, drawing polylines, drawing rectangles, creating splines, drawing curves, creating compound curves, drawing beziers, creating splines, creating surfaces, creating solids, drawing solid, creating holes and faces, drawing splines, and drawing arcs. Analysis operations are used to find and fix problems in a model. Analysis operations

include: creating dimensions, creating geometry, creating contours, creating intersections, calculating volume, creating arc features, creating absolute and relative coordinates, creating angles, creating grid snap, creating leadlines, drawing polylines, creating and managing points, creating axis and scales, creating rays, creating lines, creating labels, creating views, creating 3D contours, creating surfaces, creating intersections,

The present invention relates to a liquid crystal display device, and more particularly to a liquid crystal display device capable of reducing a color shift, and a method of producing the same.

---

An array substrate constituting the liquid crystal display device has thin film transistors (TFTs) formed thereon, gate wiring lines, and signal wiring lines formed in such a manner to cross the gate wiring lines. In order to reduce the color shift, in some cases, a pixel electrode having a plurality of openings is used. In such a case, the entire surface of the pixel electrode is not illuminated by light, and a boundary is recognized. FIG. 1 is

---

a cross-sectional view illustrating a liquid crystal display device. Referring to FIG. 1, a conventional liquid crystal display device includes a gate electrode of a metal having a resistance value of the same level as that of an indium tin oxide (ITO) film. As a result, a gate line (not shown) is not fully insulated from a gate electrode 10. A drain electrode 12 and a source electrode 14 of the ITO film are formed between the

---

adjacent gate wiring lines. In this case, a color shift is generated due to the coupling capacitance between the ITO film and the drain electrode 12 and the source electrode 14. To solve the above problems, there has been suggested a method of forming a metal layer which is not conductive, such as molybdenum, on the ITO film. However, this method is not suitable for large-sized display devices. There has been

---

suggested another method of fully insulating the gate line from the gate electrode by forming a gate insulating layer on the gate electrode. However, the gate insulating layer causes a voltage delay and a light loss. In the meantime, in the conventional liquid crystal display device, an alignment film is used to align liquid crystal molecules by an anisotropic treatment. However, the above method causes a phenomenon in which liquid

---

crystal molecules change their alignment when a voltage is applied to the liquid crystal. In the above case, the alignment of the liquid crystal molecules is not in a desired direction. As a result, contrast is lowered, and light leakage occurs. Therefore, it is necessary to use a non-rubbing alignment film, in
