What's New In JPG File Size Reduce Software?

JPG File Size Reduce is an easy-to-use, handy tool for shrinking the size of large images, such as photos, from your hard drive. With this software, you can shrink the size of JPG, JPEG, GIF, BMP and other files by up to 1/5 of their original size. The software is designed to help you in three scenarios: 1) reducing the size of an image when you are trying to put it on a web page and it takes too much space; 2) reducing the size of an image on your computer hard drive to make it smaller; and 3) reducing the size of an image to free up disk space. You can select an image and view a preview of how it will look after shrinking. After you are done, you can save the shrunk image with a new name in one of the formats of your choice. For example, if you shrink the file with a name of "a.jpg", it will result in "a1.jpg", "a2.jpg", "a3.jpg", etc. You can pick any of these files as you wish. Once you are finished, you can compare the images side by side to evaluate the quality of the shrinking. The software also displays a graph that shows how the image shrank over time. You can also extract the individual parts of an image (foreground, background, title, etc.) and save them in separate files. This is ideal for web page building because you can eliminate background images and retain the default text of an image. Additionally, you can also copy a part of an image into a new file. The software is easy to use and will be a nice tool to help you shrink the size of your files. Download: JPG File Size Reduce Software enables you to reduce the size of an image. This is useful in various situations, such as photo sharing or dialing down the impact of your image collections on your computer's space. The program has a simple interface, with very few options at your disposal. The toolbar allows you to add files or a folder, clear the list, and start reducing. Once you have added an image file (the drag and drop method is supported), you can select how much you want it to be reduced in quality (adjusting is done with the aid of a slider), and start the compression process. A task takes little time to finish, after which you are able to compare the before
