RansomSaver is a free Outlook add-in that scans e-mail messages for harmful Ransomware. It can scan your Inbox, Sent Items, Drafts, and Folder-based containers. More importantly, it can perform comprehensive scans on multiple folders and even individual messages. When a threat is found, RansomSaver will either delete the original attachment or the entire message; or in the case of Ransomware, it will render the malicious files inaccessible or even delete them completely. Unfortunately, it does not prevent malicious attachments from being sent, and it's easy to miss infected files within the Inbox. A powerful and easy-to-use Outlook add-in that can deal with ransomware! Features: • Flexible: RansomSaver has a simple interface. You can start a scan right from the Add-In menu or from the toolbar. • Safe: RansomSaver's DDE technology enables you to work with external programs such as Hotmail and e-mail clients that store their e-mail in the same folder. • Quick and easy: RansomSaver is powered by Outlook's proprietary e-mail technology; so it works with all Microsoft programs, regardless of which operating system you are using. • Automate: RansomSaver works in conjunction with Hotmail or other Microsoft programs to prevent dangerous e-mails from reaching your inbox and will scan each e-mail. When a malicious Ransomware threat is discovered, RansomSaver will either delete the attachment or message, so you can quickly and effectively remove these threats. • Intuitive: The Add-In only offers simple functionality. It includes a comprehensive Help file as well as extensive settings. • Easy-to-use: The add-in is perfectly easy to use. Simply open RansomSaver, start a scan, choose your e-mail folders to scan, and then select the resulting messages. Warning: • When scanning messages that are stored in Deleted Items folder, the tool will not be able to prevent messages from being deleted. • To avoid missing infected messages, you should regularly perform scans on the Outlook Inbox to ensure that no new threats will be sent from this container. This is the only folder that RansomSaver will scan automatically; so you must perform regular scans on your main folders, including Deleted Items. Get the new RansomSaver for Google Apps!
