You may create your own shapes, use Euler's powerful editor to do so, and then save them as Virtual Reality Models (.vrm) or as polygons. The program will assist you in the creation of your models, in the proper recognition of the coordinates and in the animation of 3D objects. You may also use a library of thousands of predefined shapes, in order to do any kind of drawing. The library contains more than 4000 objects and has been

designed for the best visibility and most simple edition of the objects. All objects can be used to create new objects by means of the modeling possibilities. The library also contains some pre-designed objects that you can easily re-use, such as prismatic building and windows. Euler 3D also offers a number of tools for the editing of 3D objects: curve and surface editing tools, tools for surfaces, curves and solids. There are also a number of tools for the modeling of 3D objects, such as a drafting tool,

snap-to-grid lines and a number of editing tools. There are also 3D tools for rendering, 3D image rendering, image processing and editing, image viewing and 3D printing. This program is especially useful for the creation of 3D images of models. You can easily create a 3D rendering of your models and you can use the 3D images to display them on the web or to show them in 3D presentations.

Moreover, you can use Euler's viewer to convert a 3D model to 3D animations, use tools to create the

3D animations, edit them and save them in various formats, and combine them with images and sounds. Euler 3D can also import and export 3D models in the VRML file format (Virtual Reality Modeling Language). You can import models from many 3D file formats, including RASP, dxf, 3DS, Q3D, S3D, STL, FBX,.3DS, etc. You can export models in the VRML format. Usage: In this file you can find two files: a.exe and a.txt. If you launch the program from the command line, you should

use the following command:
euler3d.exe If you launch the
program from a file, you can use:
euler3d.exe For example:
euler3d.exe model.3ds By default,

Euler 3D is a program for creating and manipulating your own polyhedrons. It allows you to create and manipulate these "polyhedron objects" and to visualize the shape of the 3D object directly on the 2D screen, and it also supports direct interactivity of the object (rotations, scalings, etc.). The program supports 2D and 3D drawings, animations, interactive drawings, animations, transformations, duals, export to VRML, support for text

files and hex files for importing. The program supports perspective drawings, surface shading, polygon coloring, etc. You can use the objects in the program on the screen, and Euler 3D supports importing of objects from other programs, like CAD, SVGs, etc. The program is easy to use, and you can get started quickly. The intuitive graphical interface of Euler 3D is well developed and makes the program easy to use. It is designed for fast, dynamic creation of polyhedrons. The program has

many unique features, like the ability to create and manipulate duals, making animations, creating VRML files, and creating simple hex files (with import to Euler 3D), and many other useful and interesting features. Euler 3D
