as URL, content type, filename, last modified and accessed date, encoding method, file size, entry index, missing file, server response, and others. What's more, you can open the selected link with your default web browser, copy the selected information to a user-defined folder, as well as export data to TXT, HTML, CSV, or XML file format. You can copy the selected URLs to the clipboard for pasting them into other third-party tools, refresh the current information with just one click, use hotkeys, as well as delete the cache items. Last but not least, you are allowed to manually specify the folder where the Opera cache items are stored, perform search operations, check the cache data for a user-defined list of URLs, and filter the search results by image, video, audio files, or other criteria. During our testing we have noticed that OperaCacheView carries out a task quickly, and no errors showed up throughout the entire process. It doesn't eat up a lot of CPU and memory, so the overall performance of the computer is not hampered. All in all, OperaCacheView offers a handy set of tools and decent performance for helping you read the cache folder. Thanks to its intuitive layout, it is suitable for rookies and professionals alike.
