Buttery Taskbar hides the taskbar at all times, making it impossible to accidentally activate. When it is active, it only shows a menu icon and the window list. Buttery Taskbar is a simple application that enhances the Windows taskbar. It allows you to hide and show the taskbar at will. It looks like the Windows 9 taskbar, so it is possible that a few users may not even notice that it exists. It should be noted that this is not a replacement for your programs that you use to perform certain tasks in Windows, but rather a way to free up space on your screen. You can start this program via a small “Buttery” icon that will become available in the system tray. A menu will then appear in the upper-right corner with the Start button, the Jump List, and a few other options. The program works by setting the taskbar to the hidden state by default. You will then be able to open the Windows Start menu by pressing the Start button. Once the Start menu is active, the taskbar becomes visible. It remains that way until you press the Start button again. It should be mentioned that when you get rid of the taskbar, only the Jump List and Start menu remain on the screen. Detailed features • Linking the taskbar to the Start menu • Simply press the Start button to display the taskbar • Autohide • Restore previous display by pressing the Restart button • Transparent mode • Clean interface I’ve used Toast for years. From the very beginning to this day Toast has been my favorite mail client. It is relatively cheap, and you can do some special things to it – like archiving and moving to the archive folder. But Toast is so poorly documented that I have to create this tutorial just to make you aware of how Toast can be used as an email organizer. I’ve also started to collect the following tips and tricks that you could use to make your life more convenient with Toast: How to add categories to emails To add a category to your messages in Toast, you have to visit the Settings page. This is the page where you configure the layout of the program. Go to the Settings page. The second tab says “Mail”, which is probably the tab where you manage your emails. Choose “Add category”. A popup will appear. Choose “

What's New In Buttery Taskbar?

The Windows taskbar keeps track of running programs and contains other commonly used tools. However, some folks may find it annoying to have it constantly present. The Buttery Taskbar program serves to hide the taskbar at all times. The Start button is still available, and it will work just like a regular button. The application will bring up the taskbar and pop-up the Start menu when the button is pressed. The Windows taskbar is completely hidden, while the Buttery Taskbar shows up a single icon in the system tray. Buttery Taskbar Review: After you’ve downloaded and installed the Buttery Taskbar program, you’ll see a simple icon that will represent it in the system tray, letting you know the application is still running. To bring up the taskbar, all you need to do is click the Start button. The taskbar will slide down from the bottom of the screen, bringing the Start button to the front. The Start button will remain available while Buttery Taskbar is running. You can activate the program by clicking it, just as you would with any other control on the system tray. Hiding the Windows taskbar at all times can save some significant real estate in your taskbar, while still allowing access to the Start button. When the taskbar is clicked, the Start menu will appear. You’ll be able to run program shortcuts and access other essential functionality without having to use the mouse as much as you would using the auto-hide feature. The entire functionality is controlled by a single mouse click. If you have to access the Start menu at any time, click the Start button. The taskbar will then slide down from the bottom of the screen, bringing the Start button to the front. Some people may find the Buttery Taskbar feature a tad on the annoying side. Unlike Windows 8, in which a button on the taskbar pops up the Start menu, you may find yourself more likely to accidentally click the taskbar. You can disable the program from the Start menu, but it will still be linked to the taskbar. While the entire procedure is entirely controlled by a single mouse click, the program isn’t as streamlined as it might be. You’ll have to click the Start button to activate Buttery Taskbar, rather than simply clicking on the icon in the system tray. The Start menu should be familiar to anyone
