Both terms describe software for creating two-dimensional drawings. Autodesk calls it 2D drafting software. On the other hand, a CAD software is a generic term, used for programs such as CorelDraw, MicroStation, Pro/ENGINEER, Inventor, etc. Both AutoCAD and CAD are powerful 2D CAD software, that is, they both allow to create 2D drawings and diagrams by inputting data. However, AutoCAD allows drawing objects on a design plan or design drawings while CAD provides software for the creation of various objects. With AutoCAD, users can create 2D drawings and diagrams as well as 3D geometry, such as models. AutoCAD is still more popular in the world than CAD software. This is because AutoCAD is still considered the industry standard for drafting. AutoCAD is integrated with other software programs, such as Autodesk Revit, which is software for architectural and building design.
